

Napersoft CCM 6 Developer

Benefits

- Shorter deployment time with comprehensive JEE development environment for developers
- Quicker implementation of new business processes
 - End-to-end processing
 - Special document routing
 - Householding
 - Import of non-CCM content files
 - And more
- Easier integration with legacy and non-legacy core business applications
 - CRM
 - Underwriting
 - Claims
 - Billing
 - Policy Administration
- Faster integration with IT infrastructure
 - LDAP/Active Directory
 - Email systems
 - Enterprise content management systems
 - Fax systems
 - Text messaging systems
 - Messaging systems

Overview

Napersoft CCM 6 Developer is a toolkit for developers to extend the out-of-the box capabilities of Napersoft CCM 6. Developer provides a foundation structure with common routines and plug-in points for integrating CCM SOA assets, classes, and libraries of SDKs and APIs with in-house core business applications or 3rd party software packages.

Developer enables developers to integrate LDAP/Active Directory security and core business system with CCM. Developer framework can also be used to import non-CCM content files (.doc, .jpg, .bmp, etc.) into CCM for use as templates, paragraphs and images to streamline CCM Express or Enterprise Document Platforms.

Developer includes:

- Web Services - Easy-to-use Web Services to simplify administrative functions such as automating Single Sign-on identity authentication and management for a new user with integration to LDAP/Active Directory.
- Plug-ins - Flexible Plug-ins to integrate CCM with external 3rd party applications such as enterprise content management, text messaging systems, or core business applications. Easily modify internal CCM processes by rerouting destination queues or inserting special setup instructions or banner pages for a printer operator.
- Software Development Kit (SDK) - Powerful tools that enable developers to quickly and easily customize Napersoft CCM. Enable calls to exposed JAVA methods and properties for adding new sort options to distribution queues, or loading user profiles in LDAP/Active Directory.
- Napersoft CCM Document Platform - Completes a JEE development environment for developing and testing solutions faster.

Developer framework also provides SOA assets for document distribution output management that enable developers to automate the creation and delivery of well-designed, highly personalized communications including contracts, policies, declarations page, customized marketing collateral and correspondence.

Prerequisites: Napersoft CCM Express or Enterprise Document Platforms.
